SenseNET Graphic PC GUI software CD c/w dongle

Description

SenseNET™ is a Windows based program that provides central management and monitoring of up to 127 detectors on a fault tolerant communications loop with extensive error checking and correction for the utmost in reliability. For large campus type facilities, up to 16 loops of 127 detectors per loop, can be efficiently monitored.

The ability of SenseNET™ to produce site maps, warning sounds and provide spoken instruction messages, which may be unique to each detector, is highly beneficial. Detectors may also be grouped together in zones with an associated zone map, allowing alarms and faults to be quickly and easily located.

Typical Applications

- Data storage units
- Prison cells
- Plant rooms
- Air conditioning units
