# PAVA EST & GST interface with ATS8600

## Purpose

Interfacing Carrier PAVA with the ATS8600 software

## Basic configuration

In ATS8600 install Edwards EST-VES/EST-ENT-VES driver online or from the file. The driver supports the automatic import of the entire device tree from a VES system previously configured using the 'Selector' software. This can be done via option Add using wizard. Alternatively, you can manually add the EST-VES/EST-ENT-VES bus driver to the installation and "Load configuration from device" from the right-click menu. It always requires authentication via username and password, connection type is UDP.

The default credentials:

- IP Address: VES system IP. It’s recommended to set a static IP address for the LAN/WAN port.
- Port: 6123
- Username: admin
- Password: admin
- Receiving port: 0
- Different receiving port: not

If the VES device is ready to communicate, driver can be started.

Edwards EST-VES/EST-ENT-VES automatically sends real-time events any time they occur.
